NEW! Projector Lamp Connectors

Molex® offers a small pitch version of the Projector Lamp Connector for portable DLP* Projector Markets. DLP* technology is a revolutionary display solution that uses an optical semiconductor to manipulate light digitally. It is a highly reliable, all-digital display chip that delivers high picture quality across a broad range of products. With this DLP* technology, due to its smaller physical size, the over size of projector is reduced. This makes the projector smaller and lighter thus making it more portable. Molex has developed a compact Lamp connector to support the interconnect solution for power-to-lamp transmission for the DLP* Projector. It comes in two different pitch sizes, 13.00mm (.512") and 5.40mm (.213"), catering both standard and portable projector size. MicroCross™ Digital Visual Interface (DVI) Connector System

MicroCross DVI has been chosen by the DDWG as the standard digital interface for connecting a host device and display device to support high-resolution video applications. Supporting one or two digital channels driven by Transition Minimized Differential Signaling (TMDS) and/or a high bandwidth analog interface, the MicroCross was chosen for its size, performance and cost. The innovative contact design provide the industry with a video interface design which supports over 1.65Gb/s per differential pair (for a total 9.9Gb/s over a dual link implementation) and 2.5GHz support for the analog interface. This innovative approach addresses the problem of an industry in transition. By providing a single high performance interface, precious board I/O space is saved and lower system costs are achieved. The interface provides added benefits of a high cycle life interface for mobile applications and the improved EMI performance needed for high speed links. The EMI performance is achieved through the 360° shielding of the MicroCross DVI cable and connector design.

Connectors – QR/P1 Series

Fig. 1 — Plug Housing

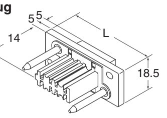

Fig. 2 — Socket Housing

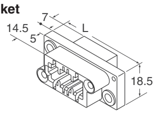

QR/P1 series connectors are small and compact high density versions of original OR/P series. Available in 8, 12, 16, 24 and 32 way. Crimps terminals assure positive and reliable termination with minimum labor. **Features:** • The coupling mechanism assures stable and reliable contact pressure through point and blade contact, in addition to smooth coupling that is sufficiently capable of dealing with variations in the coupling length specific to the plug-in connection • One opposed pair (in 12 contacts), 2 pairs (in 8, 16, and 24 contacts), and 3 pairs (in 32 contacts) can be used as power supply contacts. They are spaced further apart than the others so as to have enough creeping distance to withstand a high voltage. Fire-retardant insulation materials (UL94-0) are used. • The Guide Pin is made of steel nickel plated to be strong enough against accidental coupling shock. • The mount of a receptacle housing is done through floating bushes. Thus, they may help to give more smooth coupling of connectors by self-adjusting function. **Specifications:** • **Operating Temperature Range:** -10°C ~ 60°C • **Voltage:** *Power Terminal*: AC 250V; *Signal Terminal:* AC 125V • **Current:** *Power Unit*: 13A maximum (AWG 14 use); *Signal Unit*: 3A • **Withstand Voltage:** *Power Terminal*: AC 1000V; *Signal Terminal*: AC 500V • **Insulation Resistance:** 5000MΩ higher at DC 500V • **Contact Resistance:** *Power Unit*: 10mΩ or less at DC1A; *Signal Unit*: 15mΩ or less at DC1A • **Material:** *Insulator*: Polyethylene terephthalate, black; *Terminal*: Phosphor bronze, selective gold plating with nickel under plating

HOW TO ORDER:
4 EASY STEPS

How do I order an A26508 single row header with 16 pins?

Call Digi-Key for pricing, or determine the cost yourself following the steps below.

A☐☐☐☐☐-☐☐-ND

Base Part Number

Number of Desired Pins per Row

Step 1. Select needed Digi-Key Part Number and number of pins desired.

Step 2. Begin with the appropriate "Base Price" of your selected part number (refer to chart).

Step 3. Multiply the number of pins per row you desire by the "Pin Adder" of your selected part number (refer to chart).

Step 4. Add Step 2 and Step 3 together for final cost!

Our Example:

Step 1.	A26508-16-ND
Step 2.	.49
Step 3.	16 x .05 = .80
Step 4.	Your Cost = $1.29

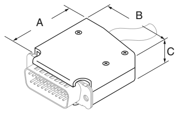
(Straight Cable Exit Shown)

Straight/90° Exit Cable Clamps can be used on a plug or receptacle and will not interfere with commonly used mating hardware. Their three-piece construction allows easy assembly to a cable harness. Also, the same cable clamp components are used for both straight and 90° cable exit applications. This is accomplished by simply positioning the Male and Female Panels on the Yoke for the desired angle. **Material:** Thermoplastic, black

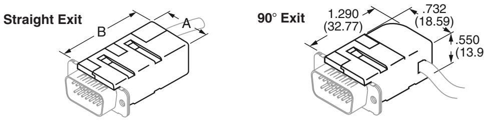
Fig. 8



Straight/45° Exit Cable Clamps can be used on either a plug or receptacle and will not interfere with commonly used hardware, such as Male Screw Retainers, Female Screw-locks or Spring Latches and Latching Blocks. Their hinged construction allows easy assembly to a harness. Also, the straight or 45° angle of the cable exit is achieved by merely positioning the Cable Support Gate for the desired angle prior to installing the assembly onto the plug or receptacle.

Material and Finish: Cable Clamp Housing: Thermoplastic, black with textured finish **Gates:** Thermoplastic, black **Pan Head Screw, 6-32 Set Screw and 6-32 Square Nut:** Steel, zinc plated (9 & 15 positions include self-tapping screws only)

Fig. 9



Straight Exit

90° Exit

Low Profile Cable Clamps feature a two piece construction which allows the two cover halves to be snapped together, no hardware is required for assembly. They can be used on plugs or receptacles and will not interfere with commonly used mating hardware. Sufficient Cable Support Gates (or a Cable Support Latch) are supplied with each cable clamp kit to achieve adjustable clamping over a wide range of jacketed cable diameters. **Material:** Thermoplastic, black

Note: To be used with HDE connectors only

Water Resistant D-Sub Connectors

Electronic equipment that is used in harsh outdoor or indoor environments, require connectors that can withstand moisture, dust and other elements that cause connectors to fail. CONEC® has developed the new water resistant connector system. The water resistant connectors meet IEC 529-IP67 specifications. This series of water resistant connectors can be successfully applied in applications where moisture, high humidity, water and dust are present. CONEC applies special sealing procedures to seal the connectors. The program is UL (E202784) and CSA (LR115000-1) approved.

EPP-918A Environmental Protection Coated Jacks

Features: • Protective compound provides both pore blocking and lubricating properties • An Ultraviolet (UV) tracer dye is added to enable easy visual inspection • Shields contacts from environmental contaminants, corrosive elements and wear resulting from repetitive mating/un-mating forces The EPP-918A blocks the metal contact pores and increases the durability of the connector from a standard 750 mating cycles to over 2,500 mating cycles.

OMRON

Optical Communication Devices

Omron has achieved the worlds smallest optical device by combining Omron's Micro Lens Array with thin film filters in a proprietary structure. This minimizes costs by reducing the number of internal parts. Omron's optical switches (1 x 2 and 2 x 2) use a low power consumption with a latching function. The numbers of components are reduced using a complex prism and are able to accommodate SC type fiber optic connectors. Applications include fault response, maintenance, (OXC) Optical Cross Connect Circuit, (OADM) Optical Add/Drop Multiplex Circuit. Omron's 4 channel and 8 channel Mux and Demux devices are SC connector compatible for transceiver and transponder applications. Using Omron's proprietary Micro Lens Array structure makes these the worlds smallest and most cost effective Mux/Demuxs available. Use for CWDM, LX4, B-PON, E-PON, G-PON and (OADM) Optical Add/Drop Multiplex Circuit.

Fiber Optic Multimode Switches

Low Profile Fiber Optic Switches are miniature, board mountable devices that permit the switching of an optical signal from one fiber to another.

Switching is accomplished by a slight pivoting motion of a spherical mirror which reflects the optical signal to the appropriate fiber.

This patented imaging technology provides very low optical loss.

Fiber Optic Switches can be terminated with any fiber optic connector.

Specifications:

• **Switching Speed:** 5msec Typical • **Operating wavelength:** 750-1450nm • **Insertion loss at 1300nm:** 0.5dB Typical, 0.8dB Maximum per FOTP-34 • **Crosstalk:** -45dB Typical per FOTP-42 • **Switch Driver:** 5V at 80mA Maximum, 12V option available • **Fiber Type:** Graded Index 62.5/125 • **Lead Length:** 1 meter • **Operating Temperature Range:** -10°C ~ 65°C per FOTP-3, C2 • **Connector Style:** ST Style • **Durability:** >1 million cycles

intersil NEW! Q-Active® Copper Cable Solutions

Intersil's Q-Active SFP+ and QSFP copper cables fill the expanding need for cost effective data center interconnects that cannot be served with passive copper or expensive fiber optic solutions.
Features: • SFP+ has reduced capital expediture through low power consumption • QSFP has increased copper cable reach 3-5x • 80% power reduction over short reach fiber optic cables • Significant reduction in data center operating expenses • Extends passive cable signal reach by 3x • Thinner gauge cables vs. passive solutions

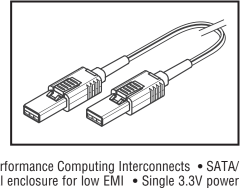
NEW! Laserwire™ Serial Data Link Active Cables



Finisar's Laserwire active cables provide the lowest cost serial data link solution for up to 10 Gb/s, while providing a very lightweight, low EMI and low-power alternative to comparable copper solutions. Laserwire operates independently of protocol and can thus be used in a wide range of applications. Laserwire plugs into the Laserwire Jack (FCBJ110LE1), a small footprint host-board connector. Laserwire utilizes a limiting receiver, avoiding the challenges of a linear receiver interface.

Applications: • 1/10 Gigabit Ethernet • 1/2/4/8G Fibre Channel • InfiniBand x1 • High Performance Computing Interconnects • SATA/SAS • HDMI • PCI-e x1 **Features:** • Single 1.0 ~ 10.3125 Gb/s bi-directional link • Metal enclosure for low EMI • Single 3.3V power supply • Low power dissipation: >500mW typical per end • RJ-45 Width • Red/Green LED link indicators **Operating Temperature Range:** 0°C ~ 60°C

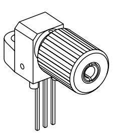
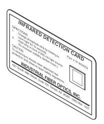
INDUSTRIAL FIBER OPTICS, INC.

Fiber Optic LEDs and Detectors

Fiber Optic family of low-cost, medium frequency, short distance fiber optic LEDs and photo detectors. **Features:** • Connector-less interface • No optical design required • Simple fiber termination and connection. Each LED and detector consists of a PBT housing, an internal active element such as an LED or photodetector, and a cinch nut to hold the fiber in place. The PBT housing retains the active element and the cinch nut while optimizing coupling between the active element and the jacketed 1000µm plastic fiber. **Shared Ratings:** Maximum Ratings and Characteristics (TA=25°C). **Operating and Storage Temperature Range (TOP,T STG):** -40°C ~ 85°C. De-rated above 25°C: 1.33mW/°C.



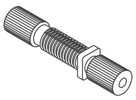
IR (Infrared) Detection Card 850nm



The illuminated area glows or produces a blueish green light when illuminated with IR light.

FB145-ND........................ **$32.50**

Fiber Optic Connector



This multi-purpose connector is designed for jacketed 1mm core plastic fiber. It utilizes the same cinch nuts, alignment principles and no-fuss fiber terminations to quickly handle the most common requirements for joining two fibers.

ELF and SCFF Series Headers, Plugs and Accessories

The ELF line comprises a family of durable, high-temperature plug and headers on .200” and 5.0mm spacing that provide flexible wire-to-board interconnect solutions for a wide variety of applications. The ELF mates interchangeably with .200” and 5.0mm competitive plugs and headers, but offers significant advantages in materials, design and performance. Screwless spring-clamp wire terminations designed to simplify installation and reduce time and labor are a feature of Amphenol Pcd's SC line of wire-to-board terminal blocks and two-piece plug and header interconnects. SCFF .200” spacing spring-clamp plugs utilize a stainless steel clamping spring to provide “screwless” wire termination. Convenient “front-front” design permits both wire entry and spring actuation from the same connector surface, simplifying operation. SCFF plugs mate with the complete range of ELF headers. Both Series are UL, CSA, TUV and CE recognized.

ELFB Series Inverted Male Headers

ELFB inverted headers are board-mounted solder pin headers which incorporate a mating configuration that is identical to a standard ELF family plug. The ELFB, in effect, is a board-mount plug. It features a plug-like nose and twin-beam plug contacts, and will mate with standard ELF-family pin headers, or similar competitive headers, providing board-to board interconnect capability. **Specifications:** • Current Rating: 15A • Operating Voltage: 300V **Approvals:** UL, CSA, TUV and CE recognized.

END PLATES:

In general end plates are used at the end of each terminal row. If different terminals of different sizes are used on 1 terminal row, end plates are also used between these different sized terminals. The overall dimension of end plates conform to the dimension of the terminal to match.

TEST-SOCKETS:

Sockets type STB are inserted in the busbar or screwed in the modular terminal in place of the terminal screw. They serve to take up the test sockets type PS.

CROSS-CONNECTION SYSTEMS:

Q - Cross connection; QI - For cross connections the cross connection bar, connection sleeve and fixing screw are already captively mounted with the corresponding number of poles.

The Pivot Connector Series is a toolless, user friendly solution for terminating signal and low power connections. Simply feed a pair of unstripped wires into the connector and complete the termination by pressing down the pivoting stuffer with your thumb or index finger. Insulation displacement contacts (IDCs) in the connector eliminate the need for stripping wires and make the termination even easier.
Specifications: • Voltage: 250 Volts AC • Current: 5 Amperage

AMP PIDG Ring Terminals

PIDG (Pre-Insulated Diamond Grip) Terminals: Meet or exceed the requirements of MIL-T-7928, Type II, Class 1 and 2. **Product Facts: • Temperature Rating:** 105°C maximum **• AMP Wire:** Solid or Stranded **• Terminal Material:** The basic terminal is conducted of fine grade high conductivity copper per ASTM B-152 and tin-plated per MIL-T-10727. Basic material for Spring Spade Tongue Terminals is phosphor bronze per ASTM B-139 and tin-plated per MIL-T-10727. AMP's special plating process creates durable corrosion resistance to salt spray and most chemical fumes. **• Copper Sleeve:** The specially designed copper sleeve, fitted over the terminal barrel, provides circumferential insulation support to the wire and allows the wire to be bent in any direction, without fraying the wire's insulation or breaking the conductor. **• Nylon Insulation (unless otherwise noted):** Nylon sleeve assures high dielectric strength.

PIDG Insulation Restricting Terminals: **Material:** • Insulation: Nylon • Terminal Body and Metallic Sleeve: Copper per ASTM B-152 • Plating: Nickel per QQ-N-290 or Tin per MIL-T-10727. Insulation Restriction Terminals prevent the insulation of thin-wall insulation wire from entering the terminal's wire crimp area during the crimping process.

PIDG Radiation Resistant: **Temp. Rating:** 150°C maximum **Material:** • Insulation: Polyvinylidene Fluoride (PVF_2) • Terminal, Splice Body & Metallic Sleeve: Copper per ASTM B-152 • Plating: Tin per MIL-T-10727
